

Customer Information about RoHS Compliance

FERROXCUBE warrants that all ferrite products as supplied by FERROXCUBE do not contain the Hazardous Substances as described by the Directive 2002/95/EC and 2003/11/EC of the European Parliament and the Council of 27th, January 2003 and 6th, February 2003 *“on the restriction of the use of certain hazardous substance in electrical and electronic equipment”* (RoHS).

This warranty applies to:

- All bare ferrite cores
- Coated toroids (nylon, epoxy, parylene)
- Encapsulated (plastic) toroids
- Encapsulated (plastic) cable shields
- Coilformers (plastic) without pins / pads (metal)
- Metal parts for assembly only (no soldering function)

For accessories and wound ferrites there is an ongoing program of RoHS compliance. Most types are compliant already and the remaining ones will be meeting the requirements within short, in any case before the date of July 1st, 2006. For specific types please check with our status files on the website or with your local sales contact.

For SMD wound ferrites, due to different temperature soldering profiles of the lead-free versus non-lead free components we recommend testing for verification at your production process. FERROXCUBE will provide samples to support the qualification of these parts in your operations.
