Regulatory Compliance Statement For Directive 2002/95/EC (RoHS)

Metglas[®] Inc. hereby declares, that the following items listed in Directive 2002/95/EC are not intentionally added to any Metglas[®] products, including all magnetic, braze, and solder alloy foils, and the coated or boxed electronic cores manufactured from the magnetic foils:

- Lead
- Mercury
- Cadmium
- Hexavalent chromium
- Polybrominated Biphenyls (PBB)
- Polybrominated Diphenyl Ethers (PBDE),

To the best of our knowledge, our raw material suppliers also do not intentionally add these elements to the products we purchase. A sampling of our finished foil by an A2LA / NADCAP certified laboratory shows that all metallic elements listed above were found to be less than ten parts per million (< 10 ppm). An additional study found that the levels of the four metallic elements were "Not Detected" (< 2 ppm) in our toroidal electronic cores. We have a compliance statement from our resin supplier that "if present at all, the levels of PBB and PBDE are below the limits of the following":

- California State Assembly Bill A.B. 302
- WEEE / Directive on Waste Electrical and Electronic Equipment (2002/96/EC)
- RoHS / Directive on the Restriction of the use of Certain Hazardous Substances in Electrical and Electronic Equipment (2002/95/EC)
- And 2003/11/EC which amends Council Directive 76/769/EC

This statement is based on knowledge as of the date of issue. Metglas[®] Inc. makes no warranties, express or implied, and assumes no liability in connection with use of this information outside of Metglas[®] Inc.'s control.
